

# TPL Product Update

Leader in RF Amplifiers

RXRF-PS

## Now Available – MOTOTRBO™ Compatible Amplifiers

TPL Communications offers two models of amplifiers that are MOTOTRBO compatible and come complete with self-contained power supply.

Models are available in the UHF frequency range of 400-512 MHz and are designed for 100% duty cycle operation. The PA6-1BE-RXRFPs features 8-15 Watts in and the PA6-1FE-RXRFPs model has 15-30 Watts in and both feature 75-100 watts output. A vertical fin design and included fan provides for excellent cooling. The amps use only 7" of vertical rack space and 19" of horizontal space, making them extremely compact. They are designed for either closed or open door cabinet use and have a convenient circuit breaker/on-off switch on the front panel. Harmonic attenuation exceeds FCC specifications and the amps incorporate SMD and LDMOS technology. RF connectors are type N, 50 Ohms. These amplifiers are field-proven and cost effective and operate in -30 to +50 degrees C temperatures. With the power supply, the amplifier is only 14 pounds.
